Topic: Tracking Monthly Expense Leakage in a Business

1. Problem Statement (What is the issue?)

- Actual expenses are exceeding planned budgets.
- Company lacks a proper system to track expenses by department/category.
- Small expenses (office supplies, travel, operational charges) accumulate and create major overspending.
- Management cannot identify:
    - Which department overspends
    - Which expense category causes leakage
    - Whether departments consistently spend beyond their limits
    - Spending trends over time
- Leads to poor financial control and accountability.

2. Expected Outcome (What results are expected?)

- Better visibility into spending patterns.
- Detection of departments responsible for budget overruns.
- Early detection of overspending areas and expense categories.
- Reduction in unnecessary expenses.
- Improved budgeting accuracy.
- Stronger financial discipline and accountability across departments.
- Increased profitability through cost control.

3. Data Required

- Department
- Expense Category
- Month
- Budget (Planned Amount)
- Actual Spend
- Variance (Actual − Budget)
